

2000 meters of optical cable

Overview

In 10mbps and 100mbps Ethernet, multi-mode fiber can support up to 2000 meters of transmission distance; In a 1Gbps gigabit network, the multimode fiber can support a transmission distance of up to 550 meters; So multi-mode is now used less. Fiber optic cable transmission distance is determined by two primary physical factors that affect signal quality as light travels through the fiber medium. However, the dispersion-compensating fibers can support more than 200 kilometers. How far is the multimode fiber distance?
