

800g Optical Module for Data Communication

Overview

An 800G module is a high-speed transmission module commonly used in data centers, communication networks, and other areas requiring high-density data transmission and high-speed data processing. It boasts the extraordinary ability to process 8 billion bits per second, more than doubling the. The Cisco ® OSFP 800G transceiver modules provide 800 Gigabit Ethernet (GE), 2x 400GE, 4x 200GE, and 8x 100GE connectivity options, complying with the Octal Small Form Factor Pluggable (OSFP) MSA for pluggable transceivers. These three standards share similar internal architectures, featuring 8 Tx and 8 Rx, with a single-channel rate of 100 Gbps, and requiring 16 optical fibers. 800G. 800 Gigabit (800G) transceivers are optical modules capable of handling data rates of 800 Gbps. At a time when technologies such as ChatGPT.
