

Bottom baffle of the distribution box

Overview

calming baffles are perforated baffles typically installed downstream of the inlet device in horizontal 3 phase (gas/liquid/liquid) or 2 phase (liquid/liquid) separators covering the entire liquid section. In some cases, depending upon the type of inlet device used, it. Precast distribution boxes serve to distribute the flow of wastewater from the septic tank evenly to the absorption field, leaching field or seepage pits. This ensures even distribution so no single trench gets overloaded. This Rhino Box makes even the toughest applications a breeze with its. Although the use of perforated plate type baffles is widely specified to assist with creating plug flow conditions in the liquid phase, the detail of the design is somewhat lacking. Some aspects are suggested however: Researchers³ at Herriot-Watt University have shown that simple, perforated plate. in horizontal vessels for various reasons.
