

British Solution Waterproof Hot Channel

Overview

Hot Applied Polymer Modified Bitumen systems, commonly known as Hot Melt, have delivered a viable waterproofing solution for zero falls, flat, trafficked, extensive, inverted, and biodiverse roofs for over 40 years in the UK and are recognised as providing excellent. Hot Applied Polymer Modified Bitumen systems, commonly known as Hot Melt, have delivered a viable waterproofing solution for zero falls, flat, trafficked, extensive, inverted, and biodiverse roofs for over 40 years in the UK and are recognised as providing excellent. Hot Applied Polymer Modified Bitumen systems, commonly known as Hot Melt, have delivered a viable waterproofing solution for zero falls, flat, trafficked, extensive, inverted, and biodiverse roofs for over 40 years in the UK and are recognised as providing excellent waterproofing performance. TO SUPPORT best practice in flat roofing, the Liquid Roofing and Waterproofing Association (LRWA) has launched an updated Hot Melt Code of Practice. Providing critical technical guidance that reflects the latest advancements and regulatory standards in the sector, the guidance was developed in.

Waterproofing protects structures against water infiltration which can cause expensive and irreversible damage. It is mostly invisible after construction is completed. Every day the basement of a building, or the outermost layer of a tunnel, is exposed to intense fluctuations in moisture levels and. Bauder hot melt waterproofing systems are designed for use in inverted or buried roof scenarios. The Bauder Bakor hot melt system first achieved a CCPI mark in 2023, and was successfully reassessed in 2025.
