

Cable tray connection clamps

AI Overview

Cable tray fixing clamps are used to secure cable trays and covers, ensuring stability, proper load support, and safety during installation.

Step-by-Step Guide to Using Cable Tray Fixing Clamps

- Plan the Installation** Before using clamps, plan the cable tray route carefully. Consider clearance, load capacity, cable separation, and the type of tray (ladder, perforated, solid, or mesh) to ensure proper support and compliance with standards.
- Select the Appropriate Clamp**
 - PKP-SP1: For perforated trays, screwed in position.
 - PKP-SP2: For perforated trays, tool-free installation.
 - PKP-SPM1: For mesh trays, screwed in position.
 - DOP A2 double clamps or FRS truss-head bolts with combination nuts: For securing tray fittings and joints.
- Position the Clamp** Place the clamp over the tray edge or cover, aligning it with the tray perforations or mesh structure. Ensure the clamp does not pinch cables and maintains the minimum bend radius for exiting cables.
- Fasten the Clamp**
 - For screw-type clamps, tighten screws securely using the recommended tools, ensuring the clamp holds the tray or cover firmly.
 - For tool-free clamps, snap the clamp into place, confirming it locks securely without movement.
 - For fittings, use truss-head bolts and combination nuts to attach joint plates or bends to the tray.
- Check Alignment and Support** Ensure trays are level and straight. Maintain proper spacing between supports (typically 1.5 to 3 meters depending on tray type and load). Verify that clamps hold the tray and cover without sagging or shifting.
- Lay and Secure Cables** After clamps are installed, lay cables neatly in the tray. Use cable ties or straps to organize and separate wiring by voltage and function. Ensure clamps do not interfere with cable placement or create sharp edges that could damage insulation.
- Final Inspection** Check all clamps for tightness and proper positioning. Inspect tray alignment, overfilled sections, and unsupported spans. Confirm that covers are securely fastened with clamps, especially in vertical or high-wind installations.
