

Can a high-voltage distribution box in a factory be energized

Overview

2 and related guidance) allows energized work only when a documented evaluation shows that de-energizing would introduce additional or greater hazards, would be infeasible for operational reasons, or would prevent necessary testing or troubleshooting that. NFPA 70E (see 130. This is often because the system loading or its configuration, or both, makes it impossible to deenergize the system, or because continuity of customer service must be maintained. However, some work can only be done with. OSHA high voltage permits are necessary to ensure that workers who are working around high voltage equipment have the proper training and equipment to safely perform their work. General - Qualified employees only. The brief purposes of these components are also explained in the below section.
