

Customized Estonian Hot-swap Power Distribution Unit with Remote Monitoring

Overview

Remote switching, power monitoring, and scripting over RESTful HTTP/S, Telnet, SSH, and SNMP. Tracks and alerts current, voltage, switch activity, EPO. The Network Switched PDU provides the capability to securely monitor and control device power through a network connection. These products combine remote configuration and management with power distribution and power/environmental monitoring. What is a Switched PDU?

In addition to Smart PDU. The LM5066IEVM-626 evaluation module (EVM) is a fully assembled and tested circuit for evaluating the LM5066I high-performance hot-swap controller with PMBUS compliant SMBUS/I2C interface to accurately measure, protect and control the electrical operating conditions of systems connected to a (. Includes environmental monitoring capabilities to obtain. iPower ACU is a 3rd generation of intelligent PDUs design to aid Data Centre power management. With up to 21 intelligent programmable breakers with a rating up to 125 amps, the SMART PDU I-type, with its 1U design, is compact, hot swappable, and built to meet safety standards.
