

Distribution Box CPF

AI Overview

A CPF distribution box is an electrical floor distributor designed for safe and standardized connection of copper and aluminum conductors in residential or commercial installations.

Overview A CPF distribution box is a type of floor distributor used in electrical networks to manage and distribute power safely. It is typically made of synthetic insulating and self-extinguishing material, ensuring protection against electrical hazards and fire risks. These boxes are designed to accommodate both copper and aluminum conductors, with capacities ranging from 6 to 240 mm², depending on the connection type and use of reducer end-pieces.

Key Features

- Current Rating:** Up to 400A, suitable for medium to high-power distribution.
- Connection Type:** Conductors are fitted in terminal boxes without removable parts, using shear head tightening screws for secure connections.
- Protection:** Equipped with an IPXXB cover with a single opening to prevent accidental contact and ensure safety.
- Compatibility:** Can connect flexible links from single-pole CCPI systems, supporting a wide range of installation configurations.
- Standards Compliance:** Meets Enedis specifications HN 62-S-35, HN 60-S-01, HN 60-S-02, and NF C 14-100, ensuring adherence to French electrical safety and installation standards.

Applications CPF distribution boxes are commonly used in residential, commercial, and industrial buildings where reliable and safe electrical distribution is required. They allow for organized wiring, easy maintenance, and secure connections between main power lines and branch circuits.

Installation Considerations

- Ensure proper sizing of conductors according to the box's rated capacity.
- Use appropriate reducer end-pieces if connecting conductors outside the standard range.
- Verify compliance with local electrical codes and standards during installation.
- Maintain accessibility for inspection and maintenance while ensuring the protective cover is in place.

CPF distribution boxes provide a robust, standardized solution for electrical distribution, combining s...
