

Distribution Box European Standard

Overview

The European-style cable distribution box has been widely used in the cable engineering equipment of the power distribution network system in recent years. Its main features include double-sided opening doors and the use of wall-through bushings as connecting busbars. A cabinet that supports both surface mount electrical enclosure use and flush mount electrical enclosure use reduces inventory complexity, simplifies decision-making, and adapts more easily to different wall conditions. The electricity it uses Cable glands comply with DIN47636. A European standard distribution box —also known as a consumer unit or distribution board—is a critical component in electrical installations, responsible for safely dividing an incoming power supply into subsidiary circuits while providing overload and fault protection. SMART DISTRIBUTION BOXES FOR FLEXIBLE BUILDINGS.
