

Earthquake-resistant base for network cabinets

Overview

Seismic rack cabinets are robust enclosures designed for use in earthquake-prone areas. These cabinets feature reinforced steel structures and specialized connection elements to withstand shocks and vibrations, protecting servers, network devices, and other critical equipment. NEBS GR 63-Core certified zone 4 cabinets for earthquake prone or areas subject to regular vibrations, such as airports, factories and high rise buildings. Solid sided construction, 2 pair of fully adjustable mounting rails, Seismic bolt down base with cable access holes, top panel with cable. Belden's Server and Switch Cabinets are certified to Seismic Zone 4 requirements, passing vibration and shock testing per GR-63-CORE Network Equipment Building System (NEBS) requirements with no structural damage in a certified lab. Need additional stability, consider adding optional bolts or brackets for reinforcement. External metric M10 thread for a stable connection to the subsurface from the outside.
