

El Salvador delivery date for hybrid fiber optic cable OM3

AI Overview

El Salvador's first submarine fiber optic cable, which will support high-speed connectivity including hybrid fiber optic solutions like OM3, is expected to be operational in the second half of 2028. El Salvador currently relies exclusively on land-based links with neighboring countries and has no direct international subsea connections. To enhance digital infrastructure, Liberty Networks has been selected by the telecom regulator SIGET to construct and deploy the country's first submarine cable, connecting El Salvador to major international hubs. This project will expand bandwidth capacity, improve reliability, and provide faster internet access for the country's 6.3 million citizens. The cable system is planned to be operational by H2 2028, with Liberty Networks expected to announce its technology partner soon. While specific details about OM3 hybrid fiber optic cable delivery are not publicly disclosed, the deployment of this subsea system will likely include high-performance fiber types suitable for enterprise and commercial use, which may encompass OM3 or equivalent standards. This infrastructure upgrade is part of a broader national plan to modernize El Salvador's digital ecosystem, including fiber optic network expansion, 5G deployment, and enhanced connectivity for public and private sectors. Businesses and service providers interested in hybrid fiber optic solutions should anticipate availability aligned with the cable's operational date in late 2028, and can contact Liberty Networks for pre-deployment inquiries and potential early access options.

Article Content

Fiber Optic Cables | Fiber Patch Cables | Patch Cords, Duplex

FCD offers TAA Compliant and Made in the USA fiber optic cables. We can custom build any length and type of fiber you need and we'll ship the order typically within 1-2 days.
