

Fiber optic module single-mode dual-fiber TP

Overview

TP-LINK's TL-SM321B-2 and TL-SM321A-2 is designed to work in a pair to create an on-site gigabit fiber communication up to 2km (2,000 meters). With one single-mode fiber, the pair of modules can create a full-duplex gigabit path between your switches, storage devices, and server. Single/dual fiber and single-mode/multi-mode are independent specifications. This means you can find combinations such as single-mode single-fiber modules or multi-mode dual-fiber modules. Most single-fiber modules are single-mode due to the complexity and cost of wavelength multiplexing in. The secret lies in fiber optic technology, and understanding the basics—1-core, 2-core, Single Mode (SM), and Multi-mode (MM)—is key to mastering this field. Let's break down these terms in simple, clear language with practical examples. 2-core o In optical modules, "core" refers to. Today in 2026, SFP modules include: Key insight: Above 25G, nearly all LC-based transceivers are single-mode, because multimode (MMF) reaches drop sharply at high speeds. SFP covers 1G-100G in compact form factors. These modules also come in SMF/MMF variants, but they are not part of the "SFP. Discover high-performance single mode SFP modules for your network. How do we choose, and what are their differences and advantages?

Let's learn about this! What is a Single-Fiber (BiDi) Transceiver?

Single fiber module also called BiDi transceiver or WDM module.
