

How about a home fiber optic router

AI Overview

The best home fiber optic routers are Wi-Fi 6, 6E, or 7 models with multi-gig Ethernet ports, strong coverage, and advanced features to fully utilize fiber internet speeds.

Key Considerations for Fiber Routers

- Speed Compatibility:** Ensure the router supports at least Gigabit Ethernet to match your fiber plan. For multi-gig plans, routers with 2.5G or 10G ports are recommended.
- Wi-Fi Standard:** Wi-Fi 6 (802.11ax), Wi-Fi 6E, or Wi-Fi 7 (802.11be) provide higher throughput, lower latency, and better device handling.
- Coverage:** Mesh systems or routers with high-gain antennas are ideal for homes over 2,500 sq. ft. to eliminate dead zones.
- Device Capacity:** Look for MU-MIMO and OFDMA support to handle multiple devices simultaneously, especially in smart homes.
- Security:** WPA3 encryption and built-in security suites like NETGEAR Armor or TP-Link HomeShield protect all connected devices.
- Wired Connectivity:** Multiple LAN ports, including multi-gig options, are essential for gaming, streaming, or wired workstations.
