

How long should optical cables be stored normally

Overview

Most Fiber cables don't Need to be Replaced. If installed and protected correctly against technical and environmental conditions, they can last: 25–50 years (outdoor plant infrastructure, long-haul wiring) 15–30 years (indoor building wiring systems) 10–20 years (FTTH plant drop. Most Fiber cables don't Need to be Replaced. Damage to the cable due to improper handling cannot only be visible but also hidden affecting the parameters of the cable. Hidden damage will only become. Fiber optic cables should be stored in a climate-controlled environment where temperatures remain between 10°C and 30°C (50°F to 86°F). From FTTH optics to industrial applications, backbone transmission, and cloud data centers, fiber cables can last for decades under appropriate installation and handling. But ask any veteran network engineer, and they will tell you a different story. Others, installed in the 1990s, are still running.
