

How much does a household electrical distribution box typically cost

AI Overview

A typical household electrical distribution box costs between \$150 and \$1,900, including parts and installation, with most residential projects ranging from \$450 to \$1,500.

Cost Breakdown The price of a household distribution box depends on several factors:

- Panel Size and Amperage:** Standard residential panels usually range from 100 to 200 amps. Higher amperage panels cost more due to increased capacity and safety requirements.
- Number of Circuits:** Panels with more breaker slots (e.g., 4-way, 6-way, 8-way) are more expensive, as they accommodate more circuits for larger homes or additional appliances.
- Enclosure Type:** Indoor panels are generally less expensive than weather-resistant outdoor units, which require durable materials and additional safety features.
- Installation and Labor:** Labor costs vary by region and complexity. Simple replacements are cheaper, while full upgrades or relocations increase costs.
- Additional Features:** Modern panels may include smart monitoring, remote control, or energy management systems, which can raise the price.

Typical Price Ranges

- Basic residential panels: \$150–\$450 for parts only.
- Standard installation with breakers and wiring: \$450–\$1,500.
- High-capacity or advanced panels: Up to \$1,900 or more, especially for three-phase systems or panels with integrated smart features.

Additional Considerations

- Compliance and Safety:** Ensure the panel meets local electrical codes and certification standards.
- Customization:** Special mounting, labeling, or integration with home automation can increase costs.
- Long-term Value:** Investing in a quality panel reduces maintenance and improves safety, potentially saving money over time.

For purchasing, distribution boards and electrical panels are available from suppliers like RS Hong Kong, which offer a range of brands and configurations suitable for residential use.
