

How much does it cost to buy just the modules

Overview

A single solar panel costs between \$120-\$315 for the equipment only, or \$1,000-\$1,200 when professionally installed. Price Stabilization After Volatility: Solar module prices have stabilized in 2025 with global wholesale prices ranging from \$0.28/W, ending years of dramatic fluctuations as supply-demand dynamics rebalance and weak suppliers exit the market. When permanently attached to foundations, they can be financed. TOPCon cell prices jumped 41% in just three months, silver tripled to USD 84/oz, and China's VAT export rebate dropped from 13% to 9%—with further cuts expected in Q1. For procurement professionals, January-February 2026 represents a critical window to lock pricing before spring demand drives costs. The price of photovoltaic modules is no longer a fixed figure. Instead, it is shaped by raw material markets, production capacity, logistics, subsidy policies, and technological development. Anyone planning or purchasing PV modules today should look beyond the pure purchase price and consider the. What is a typical current solar module cost per watt for a residential system?

While prices fluctuate, you can generally expect premium residential modules to cost between \$0.40 per watt at the wholesale level, but remember this figure does not include installation fees or soft costs.
