

Inconsistent optical modules at both ends

Overview

The optical modules connected at both ends are incompatible. For example, Huawei CE series switches should use Huawei data center switch-certified optical modules or the third-party compatible optical. In this article, we will focus on teaching you how to troubleshoot and solve the common three categories of optical module failure. First, the transmission class of the optical module fault investigation and solution method. This type of optical module failure mainly includes port not UP, port. An optical module is a critical component in modern optical communication systems, directly affecting transmission stability, network reliability, and operational efficiency. However, during installation and daily operation, various issues may arise.

Compatibility Issues – It Fits, But Won't Work

Symptoms: Causes: Most mainstream manufacturers (Cisco, Huawei, HPE) restrict third-party modules via firmware verification, even if form factors (SFP+, QSFP28) match.
