

Install residual current device in primary distribution box

Overview

Installing a residual current device (RCD) in your ABB distribution board is relatively simple if you're a bit tech-savvy. First, turn off the main switch for maximum safety. The most important components are the RCD itself, the correct mounting frame, the various. An RCD is a protective device used to automatically disconnect the electrical supply when an imbalance is detected between live conductors. What is an RCD?

RCDs, or Residual Current Devices, are. Fixed setting RCD with a rated operating residual current not exceeding 30mA. RCDs with a sensitivity of 30mA is. A residual-current device (RCD), residual-current circuit breaker (RCCB) or ground fault circuit interrupter (GFCI) is an electrical safety device, more specifically a form of Earth-leakage circuit breaker, that interrupts an electrical circuit when the current passing through line and neutral. hown in Fig 1a. Therefore, an RCD exposed to such waveforms needs to be of a suitable type, otherwise a distorted waveform (or DC) could affect the time/current operation of an RCD and cause it to operate outside its correct operating characteristics – or, at worst, the RCD could fail to current.
