

Installation price of external wall distribution box

AI Overview

The installation cost of an external wall distribution box typically ranges from \$2,800 to \$6,000, depending on amperage, weatherproofing, and labor complexity.

Cost Breakdown

Hardware Costs: Outdoor-rated distribution boxes, designed for wall mounting, are more expensive than indoor units due to weatherproofing and durability requirements. A 200A outdoor panel with a new meter socket can cost between \$2,800 and \$4,500, while high-end setups with smart meters or reinforced enclosures may reach \$6,000. Standard residential outdoor panels (100-125A) generally cost \$1,200-\$2,500 including basic installation.

Installation Costs: Labor typically ranges from \$75 to \$120 per hour, with total hours between 6-18 depending on panel type, wiring complexity, and accessibility. Outdoor installations may require additional work such as conduit routing, weatherproof sealing, or structural adjustments, which can increase labor costs. For complex outdoor jobs, total installation costs including materials can climb as high as \$1,000 or more.

Additional Factors:

- Material choice:** Metal or polycarbonate enclosures are more durable and weather-resistant, increasing cost.
- Amperage and circuits:** Higher amperage panels and more circuits require larger boxes and more labor.
- Permits and inspections:** Local regulations may add \$200-\$600 for permits or meter socket replacements.
- Customization:** Lockable covers, smart monitoring, or integration with building management systems can further raise the price.

Summary

For a typical external wall distribution box, expect a total cost of \$2,800-\$6,000, which includes the box, installation, and any necessary permits. Lower-end residential setups may be closer to \$1,200-\$2,500, while commercial or high-capacity outdoor installations with advanced features will be at the higher end of the range.
