

Invisible Pigtail Finished Products

AI Overview

Invisible pigtail finished products are ultra-thin, transparent fiber optic pigtails designed for discreet indoor installations, typically using G.657A2 or G.657B3 bending-insensitive fibers. Product Overview Invisible pigtails are transparent tight-buffered optical cables covered with a layer of hot melt adhesive, designed to be nearly invisible when installed indoors. They are typically composed of G.657A2 or G.657B3 optical fibers, which are bending-insensitive and low-loss, ensuring reliable signal transmission even in tight spaces. A transparent tight jacket layer that provides mechanical protection while maintaining invisibility. A hot melt adhesive layer applied via extrusion, giving the pigtail flexibility and durability. The nominal outer diameter is usually 1.2 mm, smaller than conventional optical cables, allowing installation along walls, ceilings, or narrow gaps without being noticeable. Key Features Bending Resistance: The G.657 fibers allow the pigtails to bend sharply without signal loss, ideal for complex indoor routing. Transparency: The clear jacket and adhesive make the cable nearly invisible, suitable for aesthetic-sensitive environments like offices, old communities, or homes. Durability: Super tough and hard-coated cortical material ensures long-term reliability and resistance to mechanical stress. Compatibility: Fully compatible with standard single-mode fibers and FTTH systems, supporting high bit-rate, multi-channel, and long-distance transmission. Applications Invisible pigtails are primarily used in FTTH (Fiber to the Home) installations, office networks, and retrofit projects where conventional drop cables are undesirable. They are particularly useful in: Old buildings with limited entry points for cables. Indoor installations requiring minimal visual impact. High-density network environments where space is constrained. Manufacturers and Availability Several manufacturers produce invisible pigtail finished products, including TTI Fiber Communication Tech. Co., Ltd., GL FIBER, and GUANGDONG KST...
