

Method for horizontalizing cable trays at 90 degrees

Overview

A box type cable tray horizontal bend is a fitting used to change the direction of a cable tray system horizontally, typically at a 90-degree angle. This component ensures smooth transitions around corners, helping to maintain organized and secure cable routing. Ensure your cable tray solution is designed for your application, with our vast range of ladder tray fittings. Choose from the following: Horizontal elbows, Vertical elbows, Tees, Reducers, Cross pieces, Branches Class 1 Tray Fittings are designed for use with NEMA Classes 12B and 12C Cable Trays. The box type design provides. The method for producing bridge bend elbows is as follows: Take a 90-degree cable tray bend elbow as an example, and apply the same principles for 45-degree bends accordingly. Including appropriate fastening material. 90° bend, horizontal, for all cable tray types of 50 mm side height.
