

No color sequence skipping fusing tray

Overview

Clean the recoating roller to avoid material dropping onto the tray. Insert the build unit into the printer and clean the build-unit platform. Locate the label on the back of the calibration tray and use the Up and Down buttons on the front panel to enter the number that you see. I have had cases where a piece of paper gets caught in the duplex tray and it jams the flag but loses contact with rollers. Take a stiff piece of paper and try pushing it in and out, or use a. From FDM filament issues to intricate Resin (SLA/DLP) anomalies, encountering print failures is a normal part of the process. Use the table of contents below to jump to your specific problem, or read through to build a complete troubleshooting toolkit. Place. How to check and change Paper Type "Plain" from "Light" to "Normal" (NOTE: This can be done at the printer's control panel or through EWS (Embedded Web Server)): Select "Normal", the settings have now been changed. We don't settle for less than perfect, so we don't expect you to either.
