

Package loss when pinging the core switch from the terminal

Overview

Switch port connectivity issues can cause network performance problems, such as slow data transfer, packet loss, or network downtime. To troubleshoot these issues, you need to use network hardware diagnostics tools that can help you identify and resolve the root causes of the. Every few minutes, we start experiencing packet loss when pinging even devices on the same VLAN. This just started happening a few days ago. I've already looked at the common culprits such as bridging loops (spanning-tree is enabled on all ports except switch uplinks). I had a bunch of ports with. Basically when I start cutting over the daisy chain riser to the new switches we start losing connection across the riser. In this lesson, I'll show you how you can use it to troubleshoot issues in your network. To ensure uninterrupted network operation, it's crucial to identify and fix the cause.
