A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The distribution box assembles switchgear, measuring instruments, protective appliances, and auxiliary equipment in. The non-standard distribution box is used for driving multiple driven shafts through one driving shaft of the gearbox, so as to realize the power distribution function of driving multiple loads by one power source, with gear ratio of 1. Compared with standard cabinets (boxes), non-standard custom cabinets (boxes) have higher flexibility and.
