

Price Inquiry for Renovating Distribution Boxes in the Netherlands

AI Overview

Renovating or replacing a distribution box in the Netherlands typically costs between €450 and €1,500, depending on the number of groups, type of system, and installation complexity.

Average Costs

Standard consumer unit replacement: For a typical home, installing a new consumer unit (distribution box) with 4-6 groups costs around €450-€800, including materials, labor, and 21% VAT. Larger systems with 8-12 groups can cost up to €1,500.

3-phase distribution board: Upgrading to a 3-phase system, often required for induction hobs, heat pumps, or EV charging stations, can increase costs due to additional materials, labor, and a more powerful main switch.

Factors Affecting Price

Number of groups: More groups require more circuit breakers and wiring, increasing material and labor costs.

Type of system: Single-phase vs. three-phase systems affect both the complexity and cost of installation.

Labor and installation complexity: Older homes or renovations requiring rewiring may incur higher labor costs.

Brand and quality of components: Premium brands like Hager, ABB, or Eaton are more reliable but slightly more expensive.

Additional features: Installing residual current devices (RCDs), earth leakage circuit breakers, or circuits for solar panels and induction hobs can add to the total cost.

Benefits of Renovation

Safety: Modern distribution boxes reduce the risk of overloads, malfunctions, and fire hazards.

Future-proofing: Supports modern appliances, EV chargers, and renewable energy systems.

Compliance: Ensures adherence to Dutch electrical standards (NEN 1010 and NEN 3140).
