

Price of a standard primary distribution box for a construction site

AI Overview

A standard primary distribution box for a construction site typically costs between \$200 and \$600, depending on capacity, features, and brand. Typical Pricing and Features Standard site boxes, also known as temporary power distribution boxes or “spider boxes,” are designed for construction sites to safely distribute electricity to tools, lighting, and other equipment. Prices vary based on amperage, voltage, number of outlets, and safety features: Basic 110V/60A boxes with multiple NEMA 5-20 outlets, built-in circuit breakers, and waterproof ABS enclosures are available for around \$200–\$300 (Amazon listings). Higher-capacity 50A single-phase boxes with twist-lock outlets and multiple straight U-ground receptacles typically cost \$400–\$600. Commercial-grade or three-phase units with enhanced durability, weatherproofing, and advanced safety features can exceed \$600, especially if they include digital meters or remote monitoring capabilities. Factors Affecting Cost Amperage and Voltage: Higher amperage or three-phase units are more expensive. Number of Circuits and Outlets: More outlets and branch circuits increase cost. Material and Weatherproofing: Aluminum or stainless steel enclosures with IP-rated protection for dust and water are pricier than basic plastic boxes. Safety Features: Built-in GFCI, differential switches, and emergency stop buttons add to the price. Brand and Certification: Reputable brands like Schneider or Western often command higher prices due to reliability and compliance with safety standards. Summary For a typical construction site, a single-phase, 50–60A temporary distribution box with standard outlets and basic safety features will generally cost \$200–\$600, while more robust or specialized units can cost more. When budgeting, also consider installation, maintenance, and potential rental options for short-term projects.
