

Price of high-quality Swiss hot-dip galvanized cable trays

AI Overview

Hot-dip galvanized cable trays in Switzerland typically range from approximately \$50 to \$150 per 2.4–3 meter section, depending on size, thickness, and load capacity.

Overview Hot-dip galvanized (HDG) cable trays are widely used in industrial and commercial electrical installations due to their durability, corrosion resistance, and load-bearing capacity. They are manufactured from carbon steel coated with zinc through the hot-dip galvanizing process, which protects the steel even in harsh outdoor or high-humidity environments. Common tray types include ladder, perforated, and solid-bottom trays, with ladder trays being popular for maximum airflow and easy cable management.

Typical Pricing Factors

Tray Dimensions: Standard lengths are usually 2.4 meters or 3 meters, with widths ranging from 100 mm to 600 mm and heights from 50 mm to 150 mm. Larger trays with higher load capacity cost more.

Material Thickness: Thicker steel (e.g., 2.5 mm) increases strength and price.

Zinc Coating: HDG trays with a minimum zinc layer of 60 μm are suitable for heavy industrial and outdoor use, which can raise the cost compared to pre-galvanized or indoor-use trays.

Fittings and Accessories: Elbows, tees, and junctions are priced per unit and add to the total project cost.

Supplier and Origin: Swiss suppliers may charge a premium due to local manufacturing standards, labor, and compliance with European norms (NEN-EN-ISO 1461), while imported trays from Asia may be cheaper but involve shipping and lead times.

Estimated Price Range

Small to medium trays (100–300 mm width, 1.0–1.5 mm thickness): \$50–\$80 per 2.4–3 meter section.

Heavy-duty trays (300–600 mm width, 2.0–2.5 mm thickness): \$100–\$150 per 2.4–3 meter section.

Fittings and accessories: \$10–\$50 per piece depending on complexity.

Additional Considerations

Customization: Swiss proj...
