

Price of positioner distribution box

AI Overview

The price of a positioner distribution box typically ranges from \$50 to \$500 or more, depending on specifications, brand, and features.

Pricing Overview The cost of a positioner distribution box depends on several factors including voltage range, number of connections, IP protection rating, material, and integrated features such as LEDs or logic module compatibility. Standard small distributors for sensors and actuators (e.g., 8–12 M8 or M12 connections, 10–30V DC, IP67) generally start around \$50–\$150, while larger or more advanced units with additional connections, higher durability, or specialized materials can cost \$200–\$500 or more.

Factors Affecting Price

- Number of connections:** More M8 or M12 ports increase cost.
- Voltage and current ratings:** Higher ratings for industrial applications are more expensive.
- IP protection class:** Outdoor or harsh-environment boxes (IP65–IP67) carry a premium.
- Material and build quality:** PBT, TPU, or metal enclosures affect durability and price.
- Additional features:** LEDs, integrated logic modules, or smart monitoring capabilities can increase cost.

Purchasing Options

- Online retailers:** Amazon and specialized distributors like ipf electronic and Intratec offer a range of options with prices visible per unit.
- Customization:** Custom configurations for specific industrial setups may increase the price beyond standard catalog units.
- Bulk orders:** Industrial buyers may receive discounts for larger quantities.

Summary For most industrial or automation applications, a positioner distribution box will cost between \$50 and \$500, with the exact price determined by the number of connections, voltage rating, IP class, and additional features. For precise pricing, it is recommended to check suppliers like ipf electronic, Intratec, or Amazon, and consider whether a standard or customized unit is required.
