

Price of universal fiber optic network cable faceplate

AI Overview

Fiber optic network cable faceplates typically range from \$2 to \$15 per unit, depending on type, material, and supplier.

Pricing Overview

Single-Port FC Fiber Optic Faceplates: These are commonly used for FTTH, CATV, and data communication networks. Prices start around \$2–\$5 per unit for standard plastic or ABS faceplates, with bulk purchase options available for lower per-unit costs (Fiberinthebox).

Multi-Port or High-Quality Faceplates: Faceplates with multiple ports, higher-grade materials (glass or ceramic), or enhanced durability can cost \$8–\$15 per unit on platforms like Alibaba and AliExpress.

eBay Options: Specialty or branded fiber optic faceplates may range from \$5 to \$60, depending on whether they include lens kits or additional components.

Factors Affecting Price

Material: Plastic faceplates are cheaper and lightweight, while glass or ceramic faceplates offer higher durability and heat resistance, increasing the cost.

Port Count: Single-port faceplates are the most affordable, while multi-port or modular designs cost more.

Supplier and Shipping: Prices vary by supplier, with international shipping potentially adding to the cost. Platforms like AliExpress often offer free shipping or discounts during sales.

Bulk Orders: Purchasing in bulk can significantly reduce the per-unit price, especially from suppliers like Alibaba.

Recommendations

For home or small office use, a single-port plastic faceplate is cost-effective and easy to install. For industrial or high-performance networks, consider glass or ceramic multi-port faceplates for durability and signal integrity. Always check shipping costs and delivery times, especially when ordering from international suppliers. By comparing suppliers and considering material and port requirements, you can find a fiber optic faceplate that balances cost, quality, and functionality.
