

Silicon Photonics Chip Fiber Optic Sensing

Overview

Caltech researchers develop ultra-low-loss silicon photonic chips with fiber-optic-like performance, enabling more coherent lasers, quantum technologies, precision sensors, and efficient data-center optical communications. By bringing fiber-like. TOKYO, Nov 13, 2024 -- Using silicon photonics technology for semiconductor optical circuits, OKI (TOKYO: 6703) has successfully developed an ultracompact photonic integrated circuit chip with a broad range of potential applications, including optical fiber sensors, laser vibrometers, and optical. GHENT (Belgium), September 23, 2024 — Sentea, a leading innovator in advanced optical fiber sensing solutions, has announced a breakthrough in the development of a single-chip Fiber Bragg Grating (FBG) read-out system. Facing the persistent demand for information. Researchers at the California Institute of Technology (Caltech) have developed a new photonic platform that allows light to travel across silicon wafers with extremely low signal loss.

Article Content

New publication in Lab on a Chip: Simplifying Fiber-Assisted

I'm excited to share that our latest research has been published in Lab on a Chip. In nanoscience and bioanalytics, understanding how nanoparticles move in liquids is essential—but

[Browse Articles | Nature Nanotechnology](#)

The interplay between thermo-optic nonlinearity and non-Hermitian degeneracy enables a three-state optical memory in silicon photonic crystal platforms.

High-Sensitivity Compact Fiber-Optic Coherent Micro-Vibration

In this paper, a compact micro-vibration sensing system assisted with silicon photonic integrated circuit is presented and experimentally demonstrated.

A photonic integrated long-distance quantum communication network

We develop a hybrid photonic transmitter chip that integrates a self-injection locking laser featuring a high-Q silicon nitride microring resonator and a thin-film lithium niobate circuit ...

Silicon photonics for high-speed communications and photonic signal ...

In this review, we focus on some of the recent advances in the technology for multichannel communications including advanced WGC for the interface of SiPh chips with optical fibers, and...

OKI Develops Ultracompact Photonic Integrated Circuit Chip Using ...

Using silicon photonics technology for semiconductor optical circuits, OKI has successfully developed an ultracompact photonic integrated circuit chip with a broad range of

Critical & Emerging Technologies Magazine

Photonics, Optics & Directed Energy Systems Focuses on the strike capabilities that deliver military effects across domains. This sub-magazine examines missiles, precision weapons, directed energy,

Neural-network-assisted polarization-robust FBG interrogation based

With the rapid development of silicon photonics, replacing discrete optical components with on-chip integrated interrogation units has become an important strategy for constructing compact

Marvell Technology, Inc. | Essential technology, done right

Designed for your current needs and future ambitions, Marvell delivers the data infrastructure technology transforming tomorrow's enterprise, cloud, automotive,

Lighting the way forward: The bright future of photonic integrated ...

This innovation offers versatility by enabling access to various photonic platforms, including Si photonic chips, ion-exchange glass optical substrates, and arrays of optical fibres.

Corning Highlights Glass Bridge for CPO and Glass-Core Packaging

Corning said it is targeting coupling loss of less than 2 decibels (dB) between optical fibers and photonic chips. Corning is currently co-developing Glass Bridge with multiple partners.

#siliconphotonics #photonics #opticalinterconnect #fiberoptics # ...

The next bottleneck in silicon photonics may not be the chip. It may be the connection to the chip. Corning's GlassBridge technology highlights the growing importance of fiber-to-PIC ...

Global Leader in Materials, Networking, and Lasers

KINTEX Exhibition Center 1, Goyang, South Korea Discover Coherent at LASER KOREA 2026, Asia's leading exhibition for laser and photonics technologies.

Lightmatter®

Lightmatter has joined the NVIDIA NVLink Fusion ecosystem, bringing our photonic interconnects to the AI infrastructure powering the world's most advanced models. Discover how our Co-Packaged Optics

Home | Laser Focus World

Organic thin film brings second-order optical nonlinear effects to silicon photonics A new type of organic thin film manipulates light in ways not currently possible on today's silicon photonic chips—and

Photonic chip technology manipulates visible to telecom wavelengths ...

Silicon-based technology brings fiber-like efficiency to a chip, showing strong potential for quantum computers, biomedical imaging and augmented reality. Researchers have created a new

Photonic IC Technology: Opening New Frontiers in

IFOS Photonic On-Chip Algorithms 1000s of Times Faster than Electronic GPUs for AI/ML Processing IFOS is a technology powerhouse with roots at Stanford University, that develops leading-edge

#epfl #nature #epfl #femtosecondlasers #integratedphotonics

The architecture nobody in integrated photonics was using: They revived the Mamyshev oscillator — a design well-known in fiber lasers, but largely ignored for chip integration.
