

Singapore Module Size Specifications and Prices

AI Overview

In Singapore, residential solar systems typically range from 5 kWp to 60 kWp, with monocrystalline panels being the most popular, costing S\$1,000-S\$1,300 per kWp installed in 2026.

Solar Panel Types and Specifications

Monocrystalline Panels Most widely used in Singapore due to high efficiency (20-25%, premium models up to 24.8%) and long lifespan (25-40 years) Single-crystal silicon structure, black appearance, performs well in high-temperature and low-light conditions Ideal for residential and commercial rooftops

Thin-Film Panels Lightweight and flexible, suitable for curved or non-traditional structures Lower efficiency (7-13%) and shorter lifespan (10-20 years) Rarely used for permanent rooftop installations in Singapore

Polycrystalline Panels Obsolete in Singapore; previously 18-21% efficiency, now phased out

Transparent Panels Niche applications, allow visible light through while generating electricity

Module Sizes and System Capacity

Residential systems typically range 5-15 kWp, depending on roof area and household energy needs A 10 kWp system requires roughly 50 m² of roof space and produces 12,000-14,000 kWh annually, enough to offset 60-80% of a semi-detached home's electricity consumption

Terrace homes: 30-55 m² roof area, supporting 7-8 kWp systems

Semi-detached and bungalows: larger roof areas allow 10-20 kWp or more

Pricing in Singapore (2026)

Installed cost: S\$1,000-S\$1,300 per kWp, including panels, inverter, mounting, electrical work, monitoring, and approvals

Typical residential system costs:

- 7-8 kWp terrace home: S\$8,000-S\$30,000
- 10 kWp system: S\$12,000-S\$20,000

Financing options: \$0 upfront, monthly payments starting at S\$99/mo

Payback period: 3-5 years depending on system size and electricity consumption

Additional Considerations System size is constrained by roof space and...
