

The one on the router is the fiber optic cable

Overview

The fiber optic cable does not plug directly into a standard home router because the signal type must be translated. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). The process to connect fiber optic cable to router requires careful attention to detail, but I'll walk you through every critical step with the precision and clarity you deserve. This comprehensive guide combines industry standards with field-tested practices to ensure you achieve a rock-solid. The optical network terminal (ONT) is the critical component that converts fiber optic signals into data your devices can use. Post-installation optimization matters —proper router placement, firmware updates, and network security configuration maximize your fiber internet investment. The ONT converts the light from the fiber into electrical signals that run via an ethernet cable. Here's a simple guide to help you through the process: 1.
