

The wires in the distribution box are bundled together

Overview

A cable bundle refers to multiple wires or cables that are grouped together, typically bound using materials like zip ties, sleeves, tape, or conduit. The purpose is to keep the wires organized, reduce clutter, protect them from damage, and make installation or maintenance. A wire bundle is used to describe the assembly of wires that run behind your wall outlet. The wires are connected in a bundle to help transmit data through homes and distribute data signals through signal types such as the cable television, telephone and the Ethernet computer network. These bundles are used in various settings, from homes to industrial projects, and play a key role in managing. The answer is often bundle wire —also known as a wire harness or cable bundle. Unlike a single-core cable that carries only one circuit, a bundle wire allows multiple. In the case of the 3-gang box featured in the linked photo, the neutral wires are currently unused by the existing switches and are co-terminated as a bundle of 4 in a wire nut.
