

UK Data Center Spiral Piping Installation Case

Overview

A Data Centre in South Wales commissioned Flowtech to deliver a pipework project that would run chilled water pipes to a computer room air-conditioning system. This pipe route spanned multiple floors and required a complex installation from our team to ensure that the project would be fulfilled. After multiple height changes, the pipework would feed into several data halls with a diameter of 2. A cable drum. The global liquid cooling market for data centers is experiencing rapid growth and is expected to reach €3182 million EUR by 2028, at a CAGR of 10.46%, according to Market Watch. With flame-free, leak-before-press technology, VSH XPress enables clean, secure connections, while VSH SmartPress enhances safety with visual leak indicators. ABN Pipe Systems is the only national manufacturer of piping systems in thermoplastic materials, offering solutions that optimise air conditioning, cooling and water distribution systems, improving the sustainability of the installation and significantly reducing operating costs. In addition, we have developed a bundled piping systems and pipework, fully linking with the existing single skin welded steel pipe system.

Article Content

Data Centres

The pipework requirements of a Data Centre can be complex and diverse, whether it be for the transfer of large amounts of chilled water for cooling purposes or for the transfer of fuel for uninterrupted/

How to optimise data centre piping systems for sustainable and future ...

Grooved mechanical pipe joining, combined with virtual design, prefabrication and BIM, holds exciting potential to overcome the challenges of data centre construction and sustainability in

Leading edge piping systems for mission critical cooling

Since data centers have such quality requirements and high energy consumption, GF Piping Systems' state-of-the-art systems, engineering and prefabrication help to provide 100 % reliability and the best

Secon-X: Case Study on Liquid Cooling in the Data Center

This was the case of a multi-phase data center project in the UK, which was carried out by Fluidpower Group Services t/a Orange County which involved the installation of Secon-X pipes to the data

Data Center Piping: Cooling Systems, Materials, Design and Liquid ...

Learn what data center piping is, how it supports cooling, chilled water, liquid cooling, leak prevention, pipe materials and AI-ready data center infrastructure.

Table of Contents

Introduction Our world has become increasingly dependent on data centers and their mission-critical digital services. Reliance on these services has led to the proliferation of data centers to keep our

data centers

Our VSH XPress stainless-steel systems provides a safe foundation for fast, reliable installation, even in tight or high-demand environments. With flame-free, leak

GF Piping Systems at Data Centre World London 2020

Our plastic piping solutions for cooling applications are the result of years of pioneering innovation, providing owners and operators of data centers with a quicker set-up and more efficient and ...

Piping Design for Liquid-Cooled Data Centers

Piping design in liquid cooling systems for data centers is a complex and crucial aspect that directly impacts system efficiency, reliability, and cost-effectiveness.

Improved Chilled Water Piping Distribution Methodology for Data Centers

In data centers where the raised floor is used only for the routing of chilled water pipes, the elimination of the raised floor further reduces the capital expense of the installation if an overhead piping system is

Data Centers

For data center planners, engineers, and owners, plastic piping systems offer numerous technical advantages over traditional metal ones. Plastic piping

data centre brochure

Our skidded solutions combine heat exchangers and pressure control technology to deliver efficient, quality and reliable flow through piping systems. Aalberts IPS solutions provide reduced installation

Case study: Data Centre, London. Geberit Mapress delivers the piping ...

Project overview: ng systems and pipework, fully linking with the existing single skin welded steel pipe system. Tanks had to be drained and de-gassed, with temporary

Piping solutions for data centres | ABN Pipe Systems

These solutions are specially designed for critical environments, providing maximum resistance to corrosion, high temperatures and disinfection processes,

Pipe systems for data center's cooling or fuel supply | BRUGG Pipes

Leading piping systems for data centers A successful data center facility is largely dependent on a secure piping infrastructure capable of reducing failures to a minimum. Our stainless steel piping

Case study: Data center piping

A data center located in the Midwest was undergoing expansion. The project involved a new data hall with an initial load of 1,300 kilowatts and capability to scale up to an ultimate load of

PP-R Piping for Modular Data Center

MODULAR DATA CENTERS To help meet the need for reliable data centers in the vast market of small- to medium-sized businesses, a Canadian manufacturing company has created a modular data

Precision Under Pressure: Pipework Installations in Data Centres by

In the high-stakes world of UK data centres, reliability is everything — and that means pipework installations must be flawless. This blog explores how specialist coded welders deliver

Data Centre South Wales | Case Studies | Flowtech

A Data Centre in South Wales commissioned Flowtech to deliver a pipework project that would run chilled water pipes to a computer room air-conditioning system.

Hyperscale Data Center Dublin Reference Case EN

At a new hyperscale data center under construction in Ireland, the ecoFIT PE-100 (polyethylene) system from GF Piping Systems has been chosen for the process cooling water. The use of this system

Flowtech Case Study: Data Centre

The pipework system would be ran from two headers, via pipework gantry to first floor, through internal Secon-X pipe into a Data Centre in South Wales, with a challenging and complex pipe route.

data centre brochure

Our cooling and HVAC systems reduce energy consumption via optimised pressure maintenance, balance systems, air and dirt removal, and efficient flow. Our skidded solutions combine heat

Beyond cool: GF Piping Systems aims to expand its role in the data ...

Data center construction is becoming increasingly complex, and global demand is rapidly rising. At the same time, planners and operators require components that are sustainable, efficient,
