

What to do if your router doesn't have a fiber optic cable

Overview

One option is to use a wireless router that doesn't require a coax outlet, such as a mobile hotspot or a wireless router that uses a cellular network. This article will explore various strategies and technologies that can assist you in. Now to address the main question: can you use a modem without a traditional cable line?

The answer is both yes and no, depending on several factors. Wireless Modems and Routers: Certain wireless modems, which incorporate routers, can connect to your ISP through technologies like LTE or 5G without. Understanding the alternatives available is the first crucial step in ensuring you have the best possible internet experience, even without fibre. This option leverages the power of cellular connectivity to provide internet access: How it works: Mobile hotspots are small, portable devices that use cellular networks to provide. Before purchasing and installing fiber optic internet, you will need to see if your home already has fiber optic cables. The best way to do this is to contact your internet provider of choice and set up an appointment for someone to come and inspect your home's wiring.
