

Zambia FDDI Connector Anti-Calming

Overview

As an alternative to using a dual-attached connection, a workstation can obtain the same degree of resilience through a dual-homed connection made simultaneously to two separate devices in the same FDDI ring. One of the connections becomes active while the other one is automatically blocked. Overview Fiber Distributed Data Interface (FDDI) is a standard for in a. It uses as its standard underlying physical medium. It was also later specified to use cable, in w. FDDI provides a 100 optical standard for in that can extend in length up to 200 kilometers (120 mi). Although FDDI logical topology is a ring-based token network, it did not use. Designers normally constructed FDDI rings in a such as a "dual ring of trees". A small number of devices, typically infrastructure devices such as and concentrators rather than host computers, were "dual."
